PREFACE.

This Geographical Gazetteer of British Columbia comprises all recorded place-names—cities, towns, post-offices, railway-stations, rivers, lakes, creeks, and mountains, etc.

PLACE-NAMING.

In the place-names of the Province there is the perpetuation of the memory of the original inhabitants—the Indians. The intrepid explorers and fur-traders have given us place-name signs of their endeavours. Of later times, we have the names of patient and steadfast pioneers attached to geographical features of the districts with which they were associated. In more recent times, outstanding work and local citizenship have contributed naming to our rivers, mountains, creeks, and sea features.

In this record much duplication of naming is noticeable which, if permanently established, would entail increasing confusion and misunderstanding. Effort is being made to eliminate duplication in naming as opportunity presents.

HISTORICAL.

Scholefield and Howay, in their "History of British Columbia," say:—

"The name of the new colony, British Columbia, was selected by Queen Victoria herself while the bill (to provide for the government of New Caledonia) was passing through Parliament. In a speech . . . Lytton constantly refers to the mainland as New Caledonia, and this was the name proposed in the bill as introduced. The reason for the change will appear in the following letter:—

"OSBORNE, July 24, 1858.

"The Queen has received Sir E. Bulwer Lytton's letter. If the name of New Caledonia is objected to as already being borne by another colony or island claimed by the French, it may be better to give the new colony west of the Rocky Mountains another name. New Hanover, New Cornwall, and New Georgia appear from the maps to be the names of subdivisions of that country, but do not appear on all maps. The only name which is given to the whole territory in every map the Queen has consulted is "Columbia"; but as there exists also a "Columbia" in South America, and the citizens of the United States call their country also "Columbia," at least in poetry, "British Columbia" might be, in the Queen's opinion, the best name."

Captain Cook's voyage of 1778 had prompted several expeditions in search of the wealth of furs, mainly sea-otter skins, along the north Pacific shores of the continent. Of these expeditions the most important in political geography was that of Captain John Meares in 1786 from China to the coast of Vancouver Island. Trouble with Spain caused by the arrest and imprisonment of Meares, a British subject, attracted particular attention. In 1792 Captain Vancouver was sent by the British Government to attend the formal apology of the Spaniards at Nootka, and in the course of this duty he made a survey of the coast from Juan de Fuca Strait to the Queen Charlotte Islands.

The year 1858 marked the conclusion of the first stage of white settlement in British Columbia. At this time Victoria, the chief centre, was a little hamlet of a few hundred people, chiefly retired Hudson's Bay Company servants. The chief interest of the region lay in the fur trade, carried on during the preceding half-century both along the shores and in the interior.

FIRST KNOWLEDGE OF THE INTERIOR.

Simultaneously, the exploration of the interior had commenced with the intrepid journey made by Alexander Mackenzie from Athabaska through the Peace River country, up the Parsnip River, over the height of land, and down the Fraser. He was the first white man to view the Fraser, the drainage-basin of which occupies about one-fourth the area of the Province; and his was the first overland journey to the Canadian Pacific coast. He reached tide-water at Bella Coola, July 22nd, 1793.

Other notable explorers followed—John Stuart, Simon Fraser, David Thompson, and others. Their explorations, prosecuted on behalf of the great fur-trading companies, culminated in the exploitation of the Pacific seaboard even as far south as California. At one time the Hudson's Bay Company had a post at San Francisco with the Spaniards and another station at Hawaii.

In 1846 the signing of the Oregon Treaty determined the southern boundary of British territory. Three years later Vancouver Island was given the status of a colony, and a governor was appointed—an event which “portended the early elimination of the fur-traders’ sovereignty, and was at least the outward and formal sign of the establishment of British supremacy and British institutions on the North Pacific Coast.” The Hudson’s Bay Company’s trading monopoly west of the Rockies terminated in 1858. At the same time the mainland was created a Crown colony under the name of British Columbia.

DEVELOPMENT THROUGH MINING.

The changed outlook for the region was emphasized and progress accelerated by the discovery of gold on the Fraser River in the year 1858. The pathways in the interior which had been sufficient for the fur trade were inadequate for the requirements of mining. New trails were built and routes established. The miners, in their hunt for gold, penetrated as far north as the tributaries of the Finlay River and south-eastward into the Kootenay area; so that knowledge of the interior of the country, previously confined to the Indians and a few men of the Hudson’s Bay Company, became general.

As this knowledge and development of the country had taken place through mining activity, the laws and regulations of the period were drawn up with the primary view of fulfilling mining requirements and encouraging development. The recording and partitioning of claims logically followed, and with this, the necessity for precise surveying of land and mineral boundaries.

With the advent of gold-seekers, James Douglas, Governor of Vancouver Island and British Columbia, asked the British Government for a military force to support his administration and protect property rights. A company of sappers and miners of the Royal Engineers, under the command of Colonel R. C. Moody, was sent out. The members of this company represented most trades and professions, and their duties were to cover three phases—those of assisting to maintain law and order, surveying of land boundaries and roads, and construction of roads, bridges, and buildings. Colonel Moody was the first Chief Commissioner of Lands and Works of British Columbia. The earliest recorded survey under his direction was of Sappertown, 1859, now a part of the City of New Westminster. In 1860 the Royal Engineers selected and surveyed a trail from “Fort” Hope to Similkameen. In 1861 they made surveys for portions of the road through the Fraser canyons, which became the route of the Cariboo Wagon-road, and, later, they surveyed lands of the Lower Fraser Valley. Surveys were made also of other possible routes into Cariboo and of what became the upper portion of the Cariboo Wagon-road. The surveys undertaken were those required for the immediate needs of transportation to the mines, and gradually sections were surveyed for agricultural purposes, mainly areas adjacent to the Cariboo Wagon-road and to the mining camps. Owing to the rugged structure of the country—that of valleys between high ranges—land surveys were confined to isolated patches as the choicest, easiest, and most accessible portions became settled.

PROGRESS FOLLOWING RAILWAY-CONSTRUCTION.

The Vancouver Island colony was merged with the mainland colony in 1866, and in 1871 the united British Columbia entered the confederation of provinces constituting the Dominion of Canada. A provision of this union with the Dominion was that a railway be constructed to connect British Columbia with the Canadian railway system and to secure the completion of such a railway within ten years from the date of union. The carrying-out of this agreement brought about the third phase of geographical knowledge in British Columbia. The search for the best railway route necessitated careful survey reconnaissance for direction and difference of elevation through the Rocky Mountains and westward to the coast. The route finally chosen for construction was through the Rocky Mountains via Kicking Horse Pass, thence through the Selkirks, down the Thompson and Fraser Rivers, and westward along the line of the Canadian Pacific Railway as it exists to-day. Until the completion of the international boundary-line survey between British Columbia and the United States, the Canadian Pacific Railway line survey formed the only reliable continuous survey connecting British Columbia coast surveyed lands with the survey system of the prairie provinces of eastern Canada.

Following the construction of the Canadian Pacific Railway with its transportation facilities, other surveys were made for railway projects, especially in southern British Columbia, to exploit the coal and land areas and the silver, copper, and lead mines. With this railway expansion land settlement and mining activity went hand in hand.

Land settlements so far had more or less followed general development of mining. At this period the attraction of the lands thrown open in the United States in great areas had been felt by the mass of land-seekers. Towards the end of the last century, when the settlement of Canadian prairie lands was undertaken in a systematic way, interest was also directed to available lands in British Columbia. Since the early years of the twentieth century, there has been increasing demand for information concerning these lands.

Land-seekers "pre-empted" (located) large areas of the interior lands, more especially those contiguous to the route surveyed for what is now the Canadian National Railway line, between Yellowhead Pass and Prince Rupert. These located lands were surveyed according to the provincial survey system.

TOPOGRAPHICAL DIVISIONS.

The boundaries of British Columbia enclose an area of 372,630 square miles, with population in 1929 estimated at 591,000, of which 53 per cent. is rural.

A part of British Columbia lies to the eastward of the Rocky Mountains. This area, which includes portions of the drainage-basins of the Liard and Peace Rivers, is an undulating plateau country some 105,875 square miles in extent, and of an altitude varying from 1,400 to 3,500 feet above sea-level. The Rocky Mountains are a series of ranges with rugged peaks sometimes exceeding 11,000 feet in altitude. From Mount Robson, 12,972 feet, the breadth and height of the "mountains" lessen until they merge into the upland rolling country north of the Peace River.

Between the Rocky Mountains and the Coast Mountains lies the drainage-basin of the Fraser River and tributaries, a region of great diversity, including many fertile valleys and benches.

The northern interior portion of the Province is of the undulating type, interspersed with prominent peaks and ridges. With the exception of mining activity at Hazelton, Stewart, Telegraph Creek, Atlin, and other points, and the agricultural development in the Peace River area, the northland beyond the immediate neighbourhood of the Canadian National Railway (Yellowhead Pass to Prince Rupert) remains to be developed. It is still the domain of the trapper and the prospector.

The watershed divide of the Coast Mountains in the south is nearly 100 miles from the sea; northward the westerly watershed broadens. Considerable areas of the Coast Mountains are almost unexplored. There is the lofty section at the northern boundary of the Province, with Mount Fairweather, 15,827 feet, which is partly in British Columbia. Mount Waddington, 13,260 feet, situated between the Homathko and Klinaklini Rivers, is the highest known peak wholly in the Province. Many peaks rise almost directly from the sea to heights of 6,000 to 9,000 feet and so present most impressive scenery.

Vancouver Island and the Queen Charlotte Islands are plateau-like remnants of a sunken range. Most of the area of Vancouver Island is still covered by primeval forest of large timber; in the south and east are rich valley and coast lands. The western face of the Queen Charlotte Islands is rugged in character, but in the east of Graham Island there are considerable lowlands.

CLIMATE.

The "OPTIMUM" (best climatic condition) for MANKIND and each animal and plant is decided by three main conditions—TEMPERATURE, HUMIDITY, VARIABILITY.

The "OPTIMUM" (ideal climate) for the white race as a whole should be an average:—

TEMPERATURE—during winter, about 40° Fahr.; during summer, about 64° Fahr.

HUMIDITY, relative, day plus night percentage, about 80% (Precipitation, about 27 inches and over).

VARIABILITY—warm days, cool nights, periods of sunshine, cloud, and rain. BRITISH COLUMBIA is within the TEMPERATE ZONE. In this temperate zone the prevailing direction of the wind is from WEST to EAST.

BRITISH COLUMBIA lies within the zone of Westerly Winds.

The warm air from over the sea, carrying heavy moisture load, in winter or summer, must rise to flow over the mountains, and so the air being cooled, the air moisture condenses into clouds or rain. Thus there is a cycle of nature and the life-giving water is again in position to become of service for **HEALTH, ENERGY, Field and Forest growth, Water-power and Wealth.**

There is a decrease in temperature of about 1 degree for every 400 feet ascended in altitude. In a country of valleys, mountains, and plains, the cool air from the mountains may flow down the valleys at night, whilst in the daytime the warm air from the valleys flows up the mountains.

In British Columbia during the seasons there is that VARIATION of climate conditions—VARIABILITY—so essential to promote the best energy of mankind—TEMPERATURE—SUNSHINE—with HUMIDITY AND VARIABILITY.

Climatic differences occur throughout the WESTERN, CENTRAL, and EASTERN districts in belts approximately following the main topographical masses.

CLIMATIC BELTS.

Western (Pacific Coast).—The range of temperature is relatively small. The summer season is cool. Zero weather very rarely occurs anywhere along the British Columbia coast. This is the effect of the combined action of ocean currents and wind from the Pacific Ocean (immense, deep body of water wherein the temperatures vary slightly during winter and summer).

Central (Fraser Basin).—There is a wider range of temperature than on the Pacific Coast. The summer days are hot, with plenty of sunshine, and the nights are cool—refreshing. Winters are cold with spells of zero weather, but with little snowfall. Periods of bright sunshine and dry cold, cloudy, and softer weather give that VARIABILITY so essential to promote the best energy of mankind.

Eastern.—Rocky Mountains section: The summers are hot in daytime, with cool nights. Winters are cold, heavy snowfall, with periods of zero weather.

Peace River Section, being part of the Great Plains or Prairie Lands of Western Canada, experiences a colder winter than the more westerly sections of the Province. The summers are hot with long days and bright sunshine, nights being cool and refreshing. Winters are cold and dry, except for short periods when affected by warm Chinook winds. The snowfall is light and the air clear and bracing.

RULES OF NOMENCLATURE.

(GEOGRAPHIC BOARD OF CANADA.)

1. **Local use to have preference.**—Unless good and sufficient reasons to the contrary exist, that name which is in common local use shall be given preference over alternative names.

2. **Priority to be recognized.**—When the priority of a name has been established by publication, particularly when such publication has occurred in any standard or authoritative work or works, that name should, if possible, be retained.

3. **Names corrupted or changed.**—A name which has been corrupted or changed should, if not too firmly established by usage, be restored to its original form.

4. **Various spellings. When to be accepted.**—In cases where what was originally the same word appears with various spellings, sanctioned by local usage or otherwise, the various spellings when applied to different features should be regarded as in effect different names, and as a rule it is inadvisable to attempt to produce uniformity.

5. **Choice between two or more names.**—Where a choice is offered between two or more names for the same place or feature, all sanctioned by local usage, that which is most appropriate and euphonious should be adopted.

6. **English possessive form.**—In English nomenclature, the possessive form should be avoided whenever it can be done without destroying the euphony of the name or changing its descriptive application. Where the possessive form is retained, the apostrophe should be dropped.

7. **Names consisting of several words.**—Names consisting of more than one word may be connected by hyphens or combined in one word, as may be advisable.

8. **City, town, or ville as part of names.**—The use of the words "city," "town," or "ville," as part of the name of a city, town, or village, is to be avoided.

9. **Canyon, Cañon, or Gorge.**—"Canyon" may be used instead of "cañon," but the form "canon" without the tilda sign must not be used. The word "gorge," which has the advantage of being both English and French, may often be substituted.

10. **Creek and Brook.**—The term "brook" is considered preferable to "creek" for very small streams.

11. **Branches of rivers.**—The practice of naming branches of rivers "South branch," "North branch," "East fork," etc., is objectionable. Each branch should be given an individual name, and, when practicable, the name of the main stream should be continued to the most distant source.

12. **Duplication of names.**—Duplication of names, especially within one province, is objectionable. This excludes such common descriptive names as Bear, Deer, Duck, Eagle, Fish, Maple, Moose, Pigeon, Pine, Sturgeon, Trout, Turtle, Wolf, Wood, Black, Clear, Green, Red, White, Mud, etc. Duplication also renders undesirable a number of descriptive names which are less common, such as many of the names applied to mountain peaks.

13. **Alternative names.**—The use of alternative names should be discontinued where possible or not inconvenient.

14. **Initial letters. When not to be capitals.**—Except on maps, the initial letters of generic or descriptive parts of geographical names should not be capitals.

15. **French names in Canada.**—French names in Canada are to be spelled, accented, hyphenated, etc., according to the rules of the French language. In English text and map printing, however, hyphenation, although recommended for French composite names, shall not be considered obligatory.

16. **English and French forms of a name.**—In cases where English and French forms of a single name have been published and have the sanction of long usage, no attempt shall be made to abolish either form, but both may be recognized and published in the Board's list of decisions, and it shall be deemed correct to use the English form in official documents in the English language and the French form in official documents in the French language. In all other cases, any duplication of form shall be discouraged and preference shall be given to the form which has priority of origin, whether this be English or French.

17. **Descriptive terms—when to be translated.**—A generic descriptive term, such as cape, bay, river, etc., added to a name, may be translated into French for

use in French publications. Likewise, the corresponding French term may be translated into English for use in English publications, but when such term is part of the name, as in "Murray Bay" and "Deux-Rivières," it shall not be translated.

18. **Objectionable Combination of words.**—As a general rule, the combination of words in different languages is objectionable.

19. **Names in foreign Countries.**—Geographic names in a foreign country should be rendered in the form adopted by that country, except where there are English or French equivalents already fixed by usage, in which case the English equivalents are to be used in English publications, and the French equivalents in French publications.

20. **Hyphens in Indian names.**—Hyphens between syllables of Indian names are to be avoided.

21. **Names of native origin.**—In a name of native origin the true sound of the word, as pronounced in the native tongue, shall be taken as the basis of the spelling.

22. **Rules of the Royal Geographical Society.**—For spelling names of native origin, the rules of the Royal Geographical Society, which are substantially in accord with official practice in France, shall be adhered to. Their broad features are as follows:—

(a.) The vowels are pronounced as in Italian, and the consonants as in English.

(b.) Every letter is pronounced, and no redundant letters are introduced. When two vowels come together, each one is sounded, though the result, when spoken quickly, is sometimes scarcely to be distinguished from a single sound, as in *ai, au, ei*.

The following amplification of the foregoing rules is given by the Royal Geographical Society to explain their application.

TABLE OF SPELLING AND PRONUNCIATION R.G.S. II.

a	Long and short, as in <i>lāvā</i>	Somāli, Bukhārā.*
ä	As in <i>fat</i> ; rare; chiefly in Teutonic languages.	
ai	The sound of the two Italian vowels; frequently slurred over, almost as in Eng. <i>aisle, ice</i>	Wadai; Shanghai.
au	The two Italian vowels; frequently slurred, almost as <i>ou</i> in <i>out</i>	Sakau; Bauchi.
aw	When followed by a consonant, or when terminal, as in <i>awl, law</i>	Dawna, Sagnaw.
b	As in English.	
c	Not to be used, but always replaced by <i>k</i> or <i>s</i> ; except in the compound <i>ch</i> , and in many conventionally-spelt words, as.....	Kandahar, Serang.
ch	As in <i>church</i> ; never <i>tch</i> or <i>tsch</i> for this sound.....	Calcutta, Célèbes.
d†	As in English.	Chad, Naroeh.
dh	Soft <i>th</i> as in <i>they</i>	Dhuvu; Riyadh.
e	Long as in <i>eh?</i> ; short as in <i>bet</i> . (For the <i>e</i> sound in the French <i>je, see</i> note at end on the "neutral vowel").....	Gēlo; Mafeking.*
(ee)	Used for <i>i</i> (<i>q.v.</i>) only in a few conventional names.....	Darjeeling, Keelung.
ei	The two Italian vowels, frequently slurred.....	Beirut, Raheita.
(eu)	Not used as a single sound.	
f	As in English; <i>ph</i> must not be used for this sound.....	Mustafa.
g	Hard, as in <i>get, gift</i> ; never as in <i>gem, gin</i>	Gedáref, Gilgit.
gh	Soft guttural.....	Dagh, Baghdad.
h	Used only when sounded; or in the compounds <i>ch, dh, gh, kh, sh, th, zh</i>	Ahmadabad, Vrh.
i	Long as in <i>marine</i> ; short as in <i>piano</i> (not as in <i>pin</i>).....	Fijí; Kíbonde.*
j	As in English; except in transliteration of Russian, Bulgarian, and Chinese, where it equals <i>zh</i> , or the French <i>j</i> §.....	Juba, Ujiji (Eng. <i>j</i>); but Jitómir, Jelezna, Jao-ping (Fr. <i>j</i>).
k	As in English; hard <i>c</i> should never be used (except in conventionally-spelt words)—thus: not <i>Corea, Cabul</i> , but.....	Korea, Kabul.
kh	Hard aspirated guttural, as in the Scottish <i>loch</i> (not as in <i>lock</i>)....	Khan, Sebkhá.

l†	} As in English.		
m			
n†			
ng		Has two separate sounds, as in <i>finger</i> and <i>singer</i>	In-gássana; Bongo; Ng-ami, Tong-a. Angöla, Kigöma; Angöra, Hönölulu.*
o		Long as in <i>both</i> ; short as in <i>rotund</i>	Gömle, Yeniköi. Poona, Foochow.
ö		As in German; equals the French <i>eu</i> in <i>peu</i> ; or nearly the English sound in <i>fur</i>	
(oo)		Used for <i>u</i> (<i>q.v.</i>) only in a few conventional names, chiefly Chinese	
oi		The Italian vowels; sometimes slurred as in <i>oil</i> . If necessary for pronunciation, a hyphen may be inserted, as in <i>Tro-itskoi</i>	Hanoi. Zlatoust.
ou		Dissyllabic, and not as French or English <i>ou</i>	
ow		Represents, as a diphthong, nearly the <i>au</i> sound (above) <i>only</i> in the romanization of Chinese. Conventional.....	Hankow.
p		As in English.	
ph		As in <i>loophole</i> ; not to be used for the <i>f</i> -sound, except in Greek or conventionally	Chemulpho; Paphos, Haiphong.
qu		Should never be employed to represent the sound of <i>kw</i> ; thus, not Namaqua, Quorra, but	Namakwa, Kworra.
r†		As in English; should be distinctly pronounced.	
s		As in English <i>ss</i> in <i>boss</i> , not as in <i>these</i> or <i>pleasure</i>	Rosario, Masikesi.
sch		As in <i>discharge</i>	Ruschuk.
sh	} As in English.		
t†			
th		Hard <i>th</i> as in <i>thick</i> , not as in <i>this</i>	Tharmida.
u		Long as in <i>rude</i> , or as <i>oo</i> in <i>boot</i> ; short as in <i>pull</i>	Zülü; Rüanda.*
ü		Represents the French <i>u</i> , as in <i>tu</i> (Fr.).....	Üsküb.
v	} As in English.		
w			
x			
y		Always a consonant, as in <i>yara</i> ; it should not be used as a terminal vowel, <i>e</i> or <i>i</i> being substituted; <i>e.g.</i> , not <i>Kwaly</i> or <i>Wady</i> , but.....	Kikuyu, Maya. Kwale, Wadi.
z		As in <i>gaze</i> , not as in <i>azure</i> .	
zh		As the <i>s</i> in <i>treasure</i> , the <i>z</i> in <i>azure</i> , or the French <i>j</i> in <i>je</i>	Zhob, Azhdaha.

NOTES.

The doubling of a vowel or a consonant is only necessary when there is a distinct repetition of the single sound, and should otherwise be avoided

Accents should not generally be employed; but in order to indicate or emphasize the stress, an acute accent may be used.

A long or short mark over a vowel (*e.g.* *ā, ð*) should only be used (and that sparingly) when without it there would be danger of mispronunciation

Hyphens will not be used except to indicate pronunciation and with the Persian *izafat*, -i-

Nuulua, Moorea,
Jidda, Muhammad.
Sarāwak, Qāntara,
Tong-atābu, Paraná.
Kūt, Hashīn, Angöra.
Mus-hil; Pusht-i-Kuh.

Liquid Sounds.—The occasional “liquid” or “palatalized” sound of *d, l, n, r, t*, etc. (as in *d'you, lure, new, clarion, tune*, etc.) is as a rule sufficiently represented by a following *y*; where, however, owing to a following consonant, or to the letter in question coming at the end of a word, the *y* is inapplicable, the liquid sound will be represented by an apostrophe, thus: *d', l', n', r', t'*, etc.

The “Neutral Vowel.”—The “indeterminate” or “neutral” vowel sound (*er*), i.e., the sound of *a* in *marine*, *e* in *often*, *i* in *stir*, *io* in *nation*, *o* in *connect*, *ou* in *curious*, *u* in *difficult*, etc., *e* in French *je*, is represented as a rule by *a*, as in *Basra, Hawiya*; but sometimes by *e*, when the sound approximates more to *e* than to *a*, as *Meshed, El Gezira*.

(In any guide to pronunciation issued by the Permanent Committee on Geographical Names, the “neutral vowel” is represented generally by the italic *e*; occasionally also by italic *a* or *u*.)

This sound must not be confused with *e-mute*, where the *e* is not sounded at all, as in *Abbeville*.

* The long and short symbols given here are merely for explanation, not for use.
† See note at end on *Liquid sounds*.

EXPLANATION OF INDEXING SYSTEM.

The geographical indexing system used throughout this Gazetteer makes it applicable to all maps showing lines of latitude and longitude. Each geographical quadrilateral of the earth's surface of 1 degree in extent in latitude and longitude is divided into the S.E., S.W., N.E., and N.W. quarters. The south-east corner of each quadrilateral gives the initial point for the figures of reference.

For example: Prince George, $53^{\circ} 122^{\circ}$ N.W., is located in the north-westerly quarter of the area between the 53rd and 54th parallels of latitude and the 122nd and 123rd meridians of longitude.

In the reference details the LAND DISTRICT in which the feature is situated is given. These "land districts" are subdivisions of the Province for "administrative" purposes only.

VANCOUVER. New Westminster dist.	49° 123° S.E.
Sited on Burrard inlet. Largest city in British Columbia. Churches of all denominations; elementary, junior high, high, technical, and normal schools; also British Columbia University. Hospitals, branches of the chartered banks in Canada, Provincial Government Offices, Customs Offices. Incorporated in 1886, it is now the third city of the Dominion; Canada's most important Pacific port, and is now the second port in rank of foreign trade on the Pacific Coast of North America.	
Vancouver possesses a fine natural harbour—open for shipping throughout the year—28 miles of water-frontage and over 20 miles of deep-water anchorage. Elevators for storage and shipping of grain are rapidly being increased in size and number to accommodate the increasing volume of the Canadian grain trade through the Port of Vancouver. In 1928, 1,325 deep-sea vessels "entered" the port. Vancouver is served by over forty-six direct steamship lines.	
Railways.—It is the western termini of the Canadian Pacific and the Canadian National Railways, the Great Northern and Northern Pacific. The Chicago, Milwaukee & St. Paul, Union Pacific, and Pacific Great Eastern Railways also operate.	
The city controls its water system (very high standard of chemical purity). Population of Greater Vancouver, 220,883; with the suburbs, 315,000. Vancouver has 92 miles of paved streets, 832 miles concrete walks, 245 miles sewers, and 298 miles of water-mains. Served by 112 miles of street-car tracks, connecting with 159 miles of interurban railway.	
Vancouver is a commercial centre and also a desirable residential city. It is outstanding in the world for commercial and industrial growth.

Vancouver island (282 m. long, average width 50 m.; area 13,048.09 sq. m.), separated from the B.C. mainland and the United States by the straits of Juan de Fuca, Haro, Georgia, Johnstone, and Queen Charlotte. The coast of the island is deeply indented with bays and arms, forming numerous deep-water harbours, providing good shipping facilities for the various industries. The country on the southern and eastern coasts is comparatively level, while the interior is broken by mountains and heavily wooded valleys. (Named Quadra and Vancouver by Captain George Vancouver in 1792. The name of Quadra has, however, long since fallen into disuse.)

VICTORIA, Victoria dist.	48° 123° S.E.
The Capital City of British Columbia, is situated on the southerly end of Vancouver Island. Provincial Parliament Buildings—Head offices of the departments of Provincial administration—Provincial Reference Library containing 180,000 volumes and an important collection of Pacific North-west Americana—Provincial Museum of Natural History, the most complete collection of anthropological material on the Pacific Coast relating to the life-history of the aboriginal races of British Columbia. Dominion Government offices and Customs offices, churches of all denominations, elementary and high schools, normal school and Victoria College (affiliated with B.C. University), hospitals, and branches of the chartered banks in Canada.	
The Dominion Government Drydock—the second largest on the Continent—is at Esquimalt.	
Since established as a Hudson's Bay Co. Fort in 1843, Victoria has been recognized as the ideal residential city of Canada. The climate is ideal, the annual rainfall averages 27 inches, and records of sunshine are high—zero weather is unknown. Golf is played the year round. Victoria has a supply of pure mountain-lake water sufficient for a population of 200,000; paved streets and tree-shaded boulevards; beautiful public park areas. Electric street-car and bus systems connect all sections of the city.	
Transportation.—Fast ferry-steamers connect with Seattle, Vancouver, Edmonds, and Port Angeles, and via Sidney (a town 18 miles distant), with Bellingham, Anacortes, and Steveston. Dock and harbour facilities for coastal and deep-sea shipping.	
Population.—Greater Victoria (including the adjoining Municipalities of Oak Bay, Saanich, and Esquimalt) has an estimated population of over 67,000 (Pub. Bur.).
